SANITARY ORDINANCES

To Be Submitted to the City Council—Property Owners Are Urged to Be Present at Meeting, Date of Which Will Be Announced in a Few Days.

Summer has not come to Maysville this year without bringing with it typhoid fever. Nine cases have been reported and one death has occurred so far—AND TYPHOID FEVER IS A PREVENTABLE DISEASE.

The absence or presence of typhoid fever or any other serious intestinal disorder depends mainly on these three factors: (1) The Water Supply, (2) The Milk Supply and (3) The Sewerage Disposal.

The Sanitary Survey forces are regularly sending away samples of the city water for bacteriological analysis and the reports have been coming back showing freedom from colon bacilli in amounts of water equal to two teaspoonfuls, thereby conforming to the Government standard of safety on interstate carriers. This of course, depends to a great extent on the chlorine content being uniform at all times and in sufficient strength to kill all harmful organisms.

Samples from private supplies are still being collected and analyzed. In every instance they have shown evidence of sewerage pollution. Sometimes the bacterial count being as high as 1000 in fifteen drops. The fault does not lie in the individual water supplies themselves, but in the grossly unsanitary vaults which surround them on all sides.

The purity of the milk supply depends upon the methods in use at the various dairy farms. An ordinance has been drafted and is not being gotten into legal form requiring all dairymen who sell milk in Maysville to be licensed. To be licensed they must conform to certain sanitary requirements in handling milk which will insure a clean and safe supply. Milk is an excellent breeding ground for germs when they are introduced into the supply. Milk is also a natural food for children. These two facts should be seriously considered by parents and all who are interested in giving babies a chance in life. Legislation governing the sale of milk will be a big step in preventive medicine in safe guarding the health and lives of the little ones.

The question of sewerage disposal is of paramount issue at present, and under the "Old Vault System" constitutes a constant menace to health. The sanitation of the cantonment zones has required the services of all the Sanitary engineers of the Public Health Service, so it has been impossible to obtain the services of one here to cooperate with the Health Survey and local authorities in outlining a better sewer system.

An improved sewer system should be obtained and is bound to come, but in the meantime, we should tide over the interval by sanitary measures, until the town is completely sewerage. In all events, the abolishment of the vaults and the introduction of the "Sanitary Privy System" should be the first act of sanitary legislation by the city council and would be one of the greatest single things Maysville could do in the conservation of health and life.

The vaults should be treated with hypochlorite of lime and closed up. A fly tight properly ventilated box, containing a water tight receptacle, such as has been on exhibition at the Survey Offices, should be installed in the old privy house and the cans scavenged once weekly as follows. The city scavenger begins his rounds with a wagon load of clean cans with covered tops. As he visits each house to be scavenged the exchange is made, the clean cans replaced for the ones to be scavenged, which are covered and hauled to the disposal and wash stations. These disposal stations consist of concrete receptacles over main sewer lines and should be located near the mouth of the lines, below the intake pipe for the water supply.

The cans are rinsed with water and disinfected. A little of the disinfecting solution is left in the can and it is ready to be carried to the next place to be scavenged. This system can be

operated at the cost of only \$3 to \$5 a year per home and is absolutely sanitary.

The property owners install the boxes, the city buys the cans and the inmates of the various homes pay the scavenger fee. The following are some of the cities that have installed this system in the unserved area with marked success:

1. Greenville, S. C.
2. Tuscaloosa, Ala.
3. Rome, Ga.
4. Hillsboro, Texas.
5. Hubbard City, Texas.
6. Okmulgee, Okla.
7. Henryetta, Okla.
8. Morris, Okla.
9. Union City, Tenn.
10. Lindale, Ga.
11. Excelsior Springs, Mo.

It is all important that property owners be present at the council meeting when these ordinances are presented for action. Their adoption may mean the safe guarding of you or your families' health and certainly the health and lives of your neighbors and friends in the years to come.

The date of this council meeting will be announced soon.

THIRD MAN ARRESTED IN PROBE OF ALLEGED PLOT AT ASHLAND

A dispatch from Ashland, Ky., says: A. W. Roberts, a tailor, who came to Ashland about three months ago from Newport News, Va., was the third person arrested in connection with the investigation of an alleged plot to destroy the Solway coke plant.

Michael O'Malley and L. W. Dragon, the men arrested Tuesday, both have confessed, it is said, that they shipped to St. Louis samples of by-products made at the Solway plant.
